Description

Cet ouvrage a pour objectif de former des biostatisticiens possédant les bases des méthodes statistiques et la capacité de mettre ces théories en pratique. Il permet à l'étudiant de comprendre et d'analyser de façon critique des études ayant trait à la santé, par exemple des essais cliniques en épidémiologie des populations ou en santé communautaire. L'étudiant aura acquis suffisamment d'habiletés et de connaissances pour concevoir, réaliser et analyser des études épidémiologiques. You should know how to fit multiple linear regression models, how to interpret regression coefficients in these models and how to perform hypothesis tests about regression coefficients. You should be familiar with case-control, cross-sectional and cohort study designs. This volume offers a comprehensive introduction to basic ideas and techniques in modeling infectious diseases, for the comparison of strategies to plan for an anticipated epidemic or pandemic, and to deal with a disease outbreak in real time. Un outil pour acquérir des connaissances pratiques, en faisant appel à des exemples concrets, mais sans concession quant à la rigueur du raisonnement.

Monographie : Designing a research project: the basics of biomedical research . Monographie : Le contrôle statistique de la qualité en milieu hospitalier : un . -Québec : Département de sociologie, Faculté des sciences sociales, 1980. . change : a review for health care managers, professionals and researchers / ILES,.
